Product Information

Product ID P5878

CAS No. 2181-04-6

Chemical Name (17 α)-17-Hydroxy-3-oxopregna-4,6-diene-21- carboxylic acid γ -lactone free acid potassium salt

Synonym Canrenoic acid Potassium salt, Kanrenol, Soldactone, Venactone

Formula C₂₂H₂₉KO₄

Formula Wt. 396.56

Melting Point

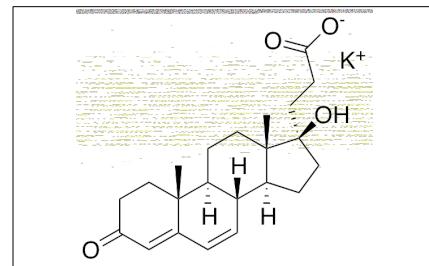

Purity \geq 98%

Solubility Very soluble in water and alcohol. Insoluble in chloroform and ether.

Store Temp Ambient

Ship Temp Ambient

Description Potassium canrenoate is a mineralocorticoid/aldosterone antagonist that exhibits cardioprotective, nephroprotective, antihypertensive, and anti-fibrotic activities. In animal models of cardiac ischemia/reperfusion, potassium canrenoate increases phosphorylation of ERK1/2 and Akt, decreasing infarct size in an adenosine receptor-dependent manner. Potassium canrenoate also improves high salt diet-induced renal dysfunction, reversing the effects of hypofiltration. Additionally, potassium canrenoate displays negative inotropic activity at high doses, decreasing heart rate, blood pressure, and ventricular contraction; it also prolongs ventricular repolarization and the refractory period.

Bulk quantities available upon request

Product ID **Size**

P5878 1 g

P5878 5 g

P5878 25 g
